MAINTENANCE INSTRUCTIONS

---

TEXTURED WALLPAPER

The wallcovering is treated with a stain repellent treatment, thanks to which liquid stains won't be absorbed immediately and can be wiped off with a clean sponge or tissue. This has to be done immediately and without rubbing too hard in order not to damage the fibres.

If the wallcovering gets dusty, it can be vacuum cleaned or cleaned with a special textile sponge (which is used dry, like an eraser)

• HIGH PERFORMANCE:

Our High Performance range is designed for easy care and long-lasting durability. Unlike our standard products, this range is extra washable, allowing for more thorough cleaning without compromising the surface.

- You can clean High Performance wallpapers using mild detergent and water.
- The backside of a sponge (non-abrasive scrubbing side) may be used for more persistent marks.
- Warm liquid stains, such as coffee, can be wiped away effectively.
- This range is also bleach cleanable — a diluted bleach solution (as per the manufacturer's guidance) can be safely used for cleaning.

Additionally, our Rivage and HPE collections are scrubbable, meaning they can be scrubbed clean without damage to the surface.

TEXTILE WALLCOVERING

These are textile wallcoverings with water-based printing pastes. They are very delicate. They are stain repellent treated. Liquid stains can be removed if immediately wiped off with a clean and dry tissue or sponge. Hard rubbing should be avoided in order not to damage the fibres. Careful vacuum cleaning is allowed.

NATURAL FIBRES

These wallcoverings should be handled with greatest care since it is a natural product, printed with water-based printing pastes. They are not stain repellent treated. Only vacuum cleaning is allowed. All stains should be avoided.
